

PROXIMITY ALARM QUESTIONS ANSWERED

QUESTION #1

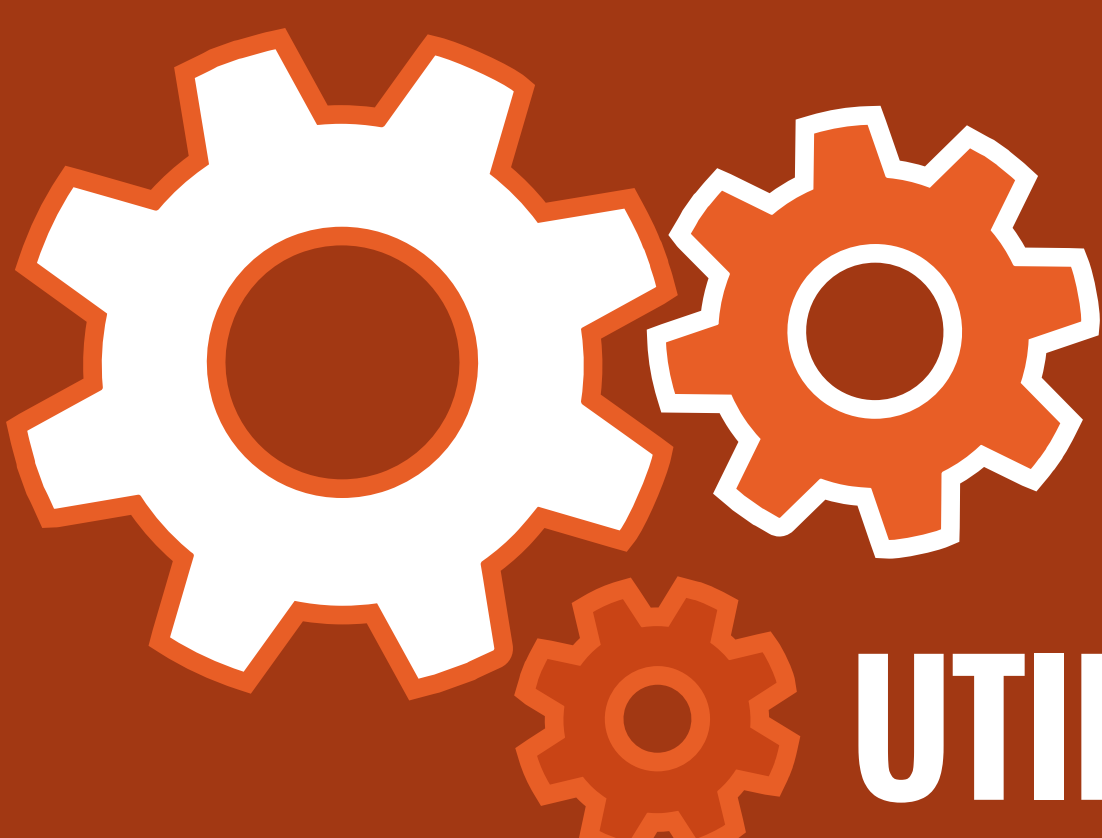

ARE PROXIMITY ALARMS TOO EXPENSIVE?

Compared to any safety investment, proximity alarms are actually the most affordable. When you factor in the value of a safe work environment, it is the best investment a company can make. **It's hard to put a price on safety.**

QUESTION #2

DO PROXIMITY ALARMS UTILIZE LIMITED TECHNOLOGY?

The fact is, proximity alarms are on the cutting edge of technology. At least 16 patents have been issued between 1964 and 2014. Currently a new ASTM standard is being developed for proximity alarms. By comparison, other options have not been tested nearly as much.

QUESTION #3

DO PROXIMITY ALARMS PROVIDE A FALSE SENSE OF SECURITY?

It's very easy to answer this myth. Proximity alarms have been in existence since the 1960's. Over 10,000 models have been sold world-wide on a variety of equipment. They are not excluded from use by any regulatory agency. **It is proven science that they provide sufficient warning as they are designed to do.** If someone thinks they might instill a false sense of security, that too, has been proven wrong. In fact, the reverse is true as operators tend to be more aware of potential dangers.

QUESTION #4

ARE PROXIMITY ALARMS HARD TO USE?

It's very likely your TV remote is more complicated than a proximity alarm. Sigalarm systems work flawlessly in freezing weather or in extreme heat. They cannot be distracted, and they do not look away. As a guardian of your safety, they are always on the job.
